Aditya Hada

apshada1@gmail.com 7693004304 apshada apshada Bengaluru, India

SKILLS

- **Programming Skills:** Golang, Python, NodeJS, C++, JavaScript, Typescript
- **Frameworks:** Gin, Express, React Native, NextJS, React, Django
- **Databases:** PostgreSQL, NoSQL, Redis, ElasticSearch, SQL, MongoDB
- **Tooling and Infrastructure:** AWS, Docker, Kubernetes, Datadog, Git, GCP, Kafa, Argo workflows, Prometheus

WORK EXPERIENCE

Senior Software Development Engineer 03/2025 – present | Bengaluru, India
Razorpay
- Ran Razorpay's production LiteLLM gateway serving ~900 daily active engineers, **850K+ requests/day** and **15B+ tokens/day**, with peaks of 870 concurrent requests. Fixed budgeting, cached-token cost accounting, Redis budget resets and Kubernetes rollout automation.
- Core engineer on LLMRouter, Razorpay's in-house Go LLM gateway. Designed a Redis-backed async budget-enforcement path (Lua reserve/settle, Redis Streams writer to Postgres, reconciler) to take synchronous database checks off the request hot path.
- Built end-to-end observability for the gateway: OpenTelemetry tracing through a cluster-wide OTel agent/collector into ClickHouse Cloud over AWS PrivateLink, delivered with Terraform, Helm and FluxCD.
- Designed and implemented an Internal Developer Platform using Backstage with service catalog, CI/CD, Kubernetes, and observability integrations, supporting **500+ developers**, **250+ microservices**, and **6,000+ deployments/day**.
- Collaborated with infrastructure and platform engineering teams to standardize developer workflows, reducing onboarding effort and improving deployment consistency.

Software Engineer 07/2021 – 02/2025 | Bengaluru, India
Fubo
- Built scalable Go microservices serving sports highlights to **1M+ users** globally.
- Developed AI-powered video processing services generating HLS and MPEG-DASH streams from AI-generated timestamps.
- Implemented Server-Driven UI architecture, reducing release dependency on app stores and improving UI iteration speed by **15%**.
- Improved API performance by up to **40%** using Redis caching, Kafka-based event-driven architecture, and backend optimizations.
- Built internal annotation tools and integrated multiple live sports APIs supporting NFL, NBA and NCAA experiences.

Tech: Go, PostgreSQL, Redis, Kafka, Python, Django, Docker, Kubernetes, GCP

Software developer Intern 01/2021 – 06/2021 | Mumbai, India
Alyve Health
- Built doctor appointment booking platform with weekly scheduling.
- Developed REST APIs and responsive React frontend.
- Optimized PostgreSQL queries and schema design for improved performance.

Tech: Python, Django, React, PostgreSQL, Docker

EDUCATION

Bachelor of Technology 07/2017 – 07/2021 | Indore, India
Shri Vaishnav Vidyapeeth Vishwavidyalaya

OPEN SOURCE

Mattermost
- **Overview:** Contributed to an open-source platform designed for secure collaboration across the entire software development lifecycle.
- **Role:** Developed features and bug fixes, focusing on improving user interface components and backend logic.

LiteLLM
- Contributed multiple production fixes and enhancements related to model pricing, budgeting, cached token accounting, reliability, and provider integrations.
- Active contributor with several merged pull requests improving OSS LLM gateway functionality.
